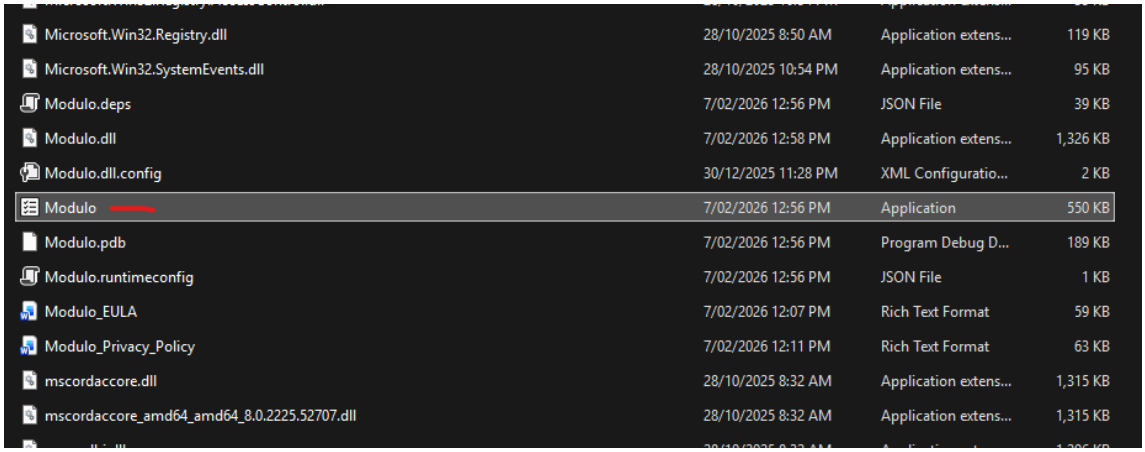
Modulo Quick Start Guide

Get Started in 5 Minutes

Welcome to Modulo! This guide will help you generate your first custom document in just a few simple steps.

Step 1: Install Modulo

Extract the Modulo.zip file to a location on your computer, then run Modulo.exe.



Microsoft.Win32.Registry.dll	28/10/2025 8:50 AM	Application extens...	119 KB
Microsoft.Win32.SystemEvents.dll	28/10/2025 10:54 PM	Application extens...	95 KB
Modulo.deps	7/02/2026 12:56 PM	JSON File	39 KB
Modulo.dll	7/02/2026 12:58 PM	Application extens...	1,326 KB
Modulo.dll.config	30/12/2025 11:28 PM	XML Configuratio...	2 KB
Modulo	7/02/2026 12:56 PM	Application	550 KB

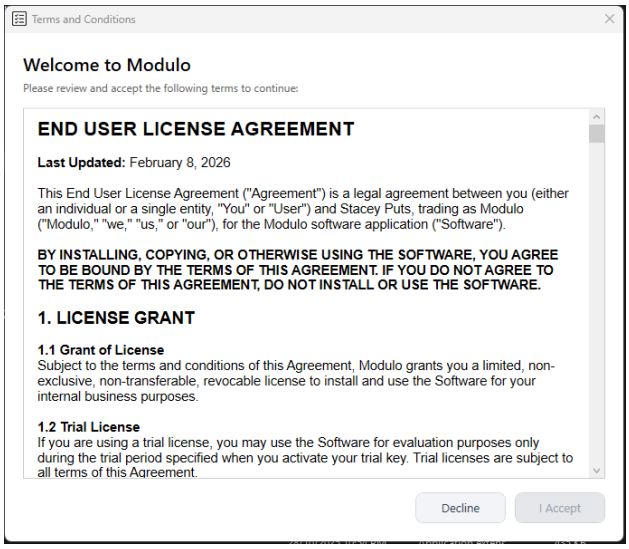
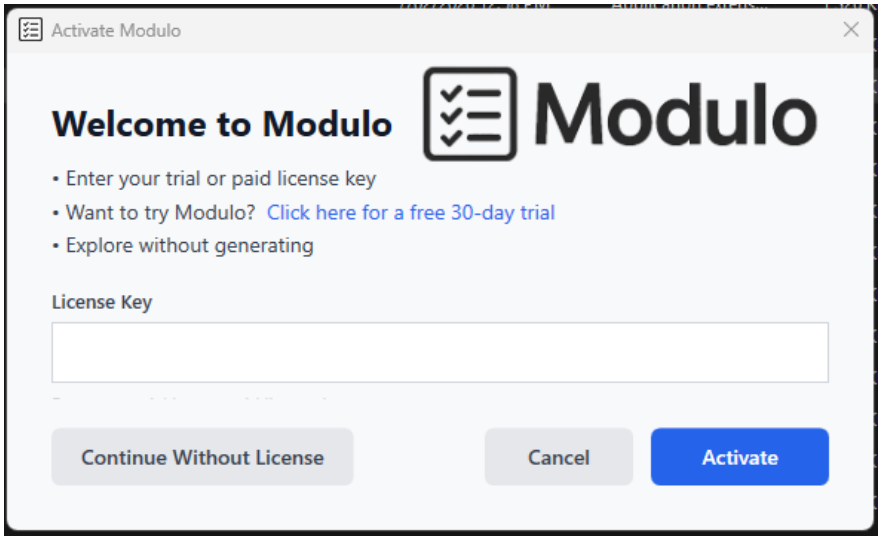
Step 2: Accept Terms and Conditions

On first launch, you will be asked to review and accept the End User License Agreement and Privacy Policy. Scroll to the bottom and click "I Accept" to continue.



Step 3: Activate Your Trial

Enter the trial key you received and click "Activate" to start your 30-day free trial.

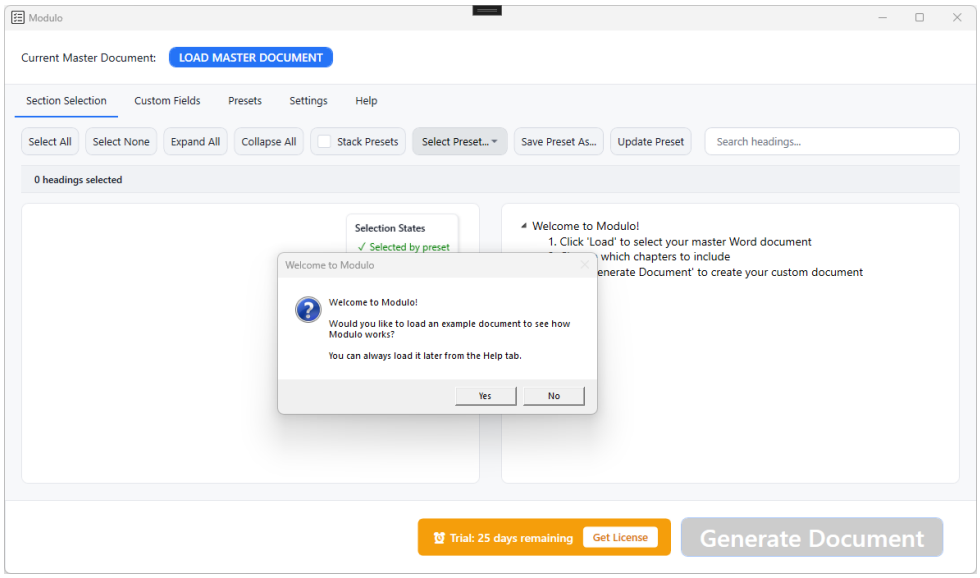


Step 4: Load Your Master Document

On your first launch, Modulo will ask if you'd like to load the example document. Click Yes to get started!

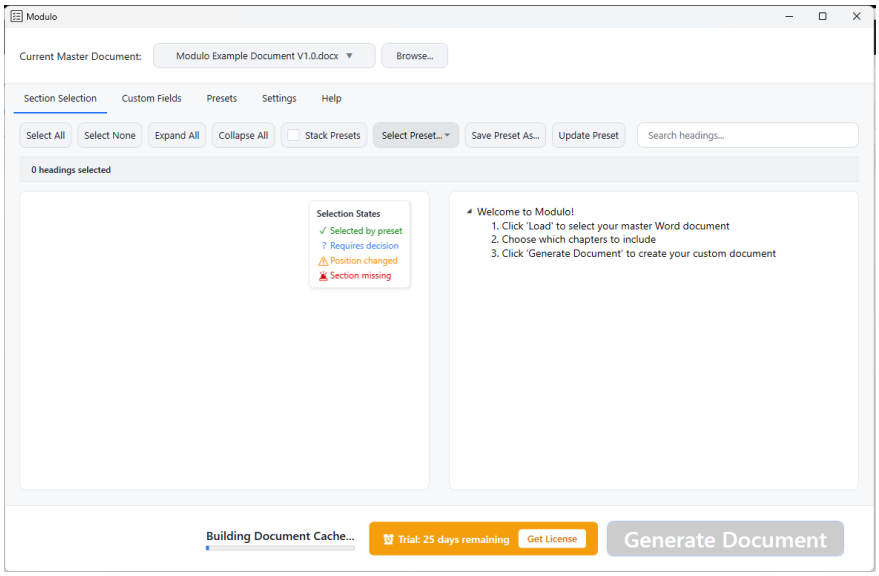
Otherwise Click "Load Master Document" to select your template Word document.

Note: *If you are trying Modulo for the first time, we recommend loading the included "Modulo Example Master Document" to see how everything works. You can load your own master document later.*



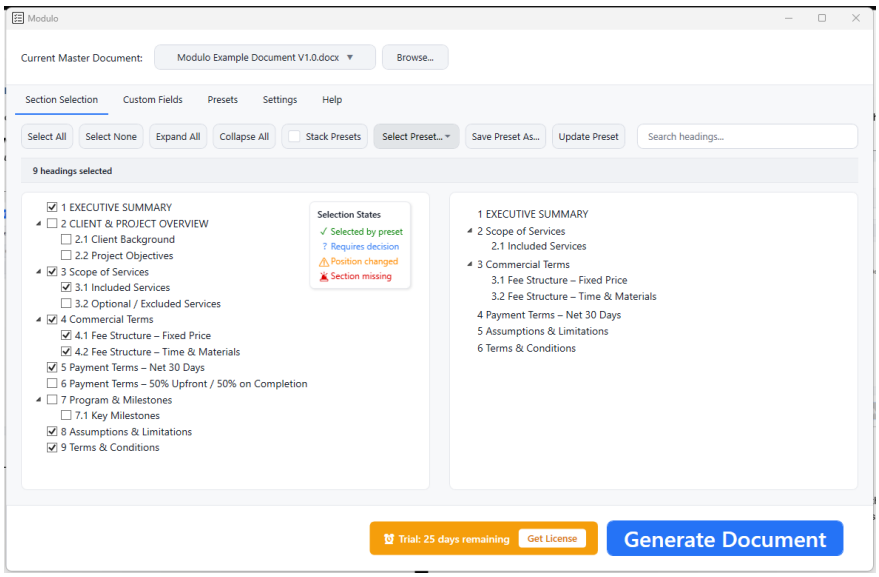
Step 5: Wait for Document Processing

Modulo will create a cache of your document for faster processing. This only happens on first load or when you update your master document.



Step 6: Select Sections and Generate

Check the boxes next to the sections you want to include in your document, then click "Generate Document". Modulo will create your custom document in seconds!



Congratulations! You have generated your first document with Modulo. For advanced features like presets, custom fields, and shared libraries, please refer to the Modulo User Guide.

Presets

About Presets

This Quick Start Guide demonstrates manual section selection to show you how Modulo works. However, in regular use, you won't be checking boxes manually each time.

Modulo's preset system allows you to save your common section selections and apply them instantly. Instead of clicking 100+ checkboxes, you simply load a preset for a common document type, and all your standard sections are selected automatically.

For documents with hundreds of sections, presets are essential. See the **Modulo User Guide** for detailed information on creating and using presets.

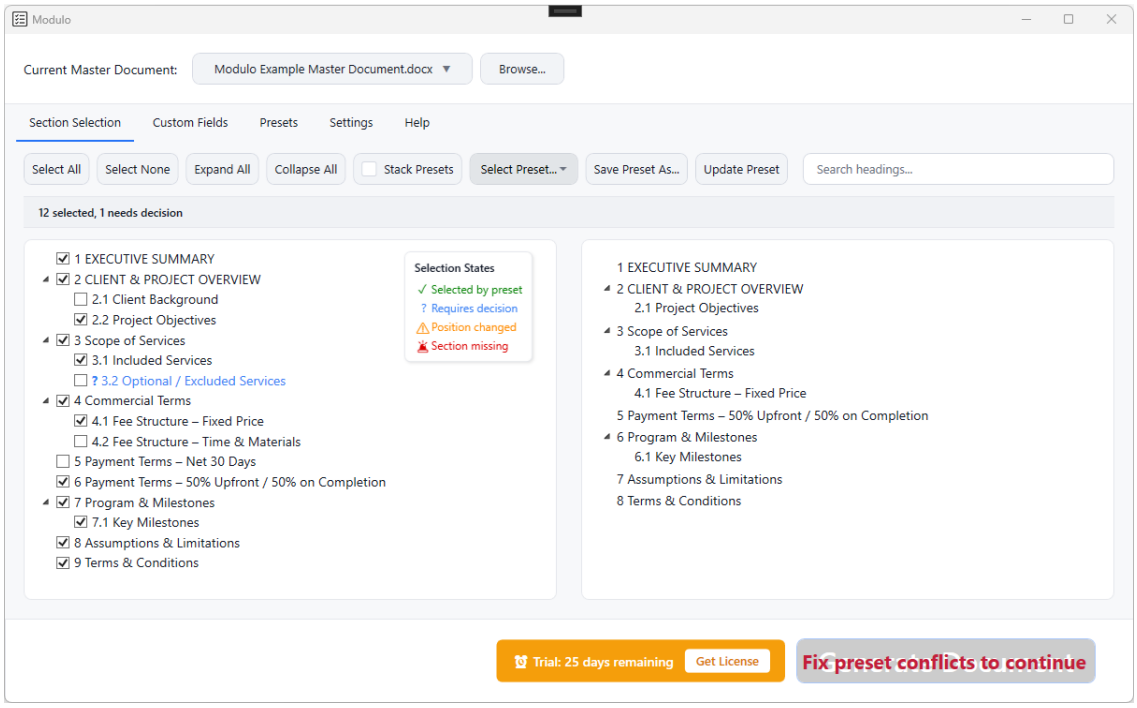
The below provides a brief overview of saving and loading presets.

Step 7: Saving Presets

Instead of manually selecting sections each time, you can save your selections as a preset.

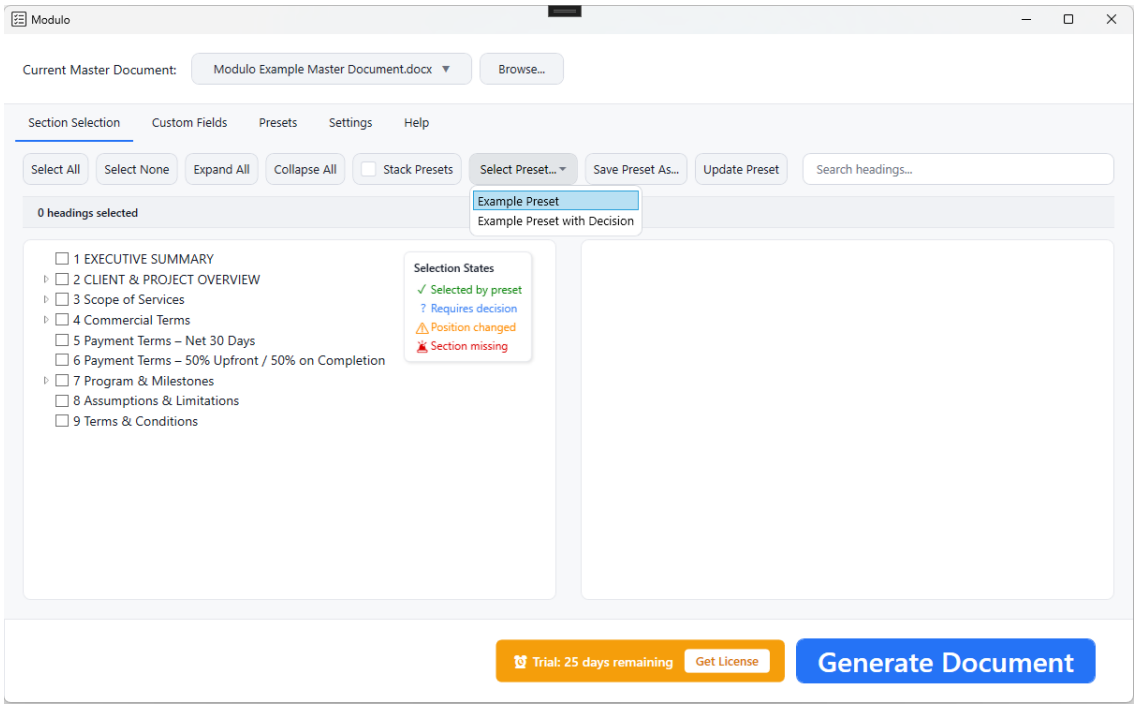
Select the sections you want to include, then click "Save Preset As..." and give it a name. Next time you need the same document type, just load the preset instead of checking boxes manually.

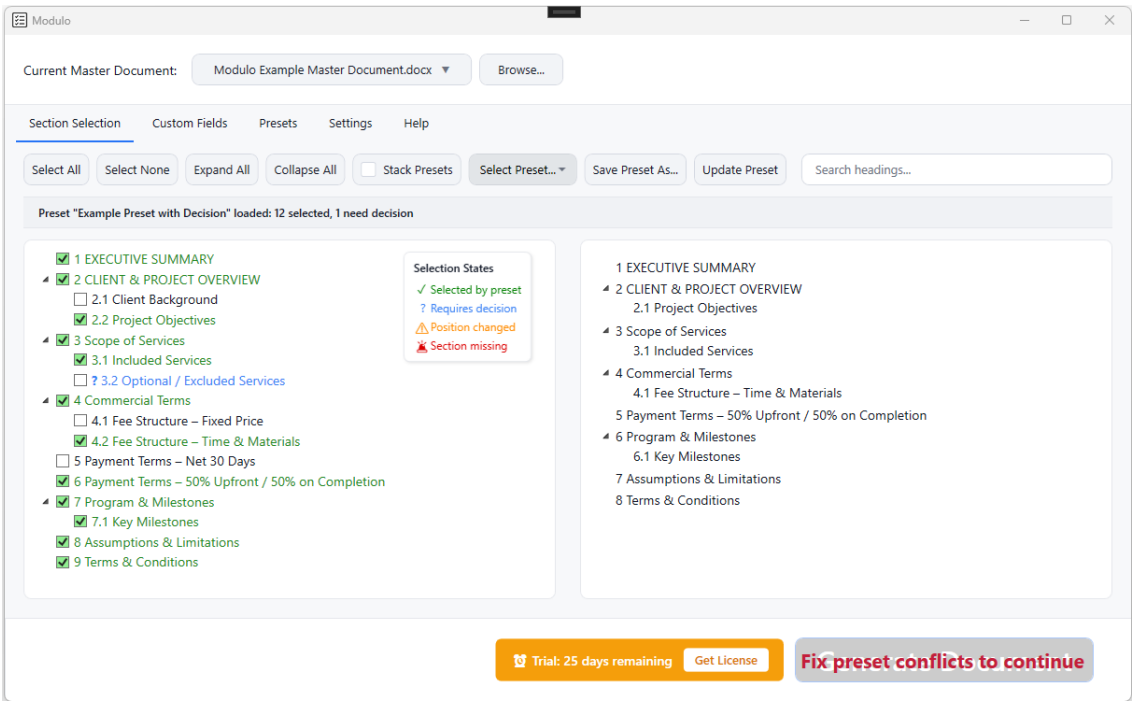
For sections that sometimes apply but need a case-by-case decision, right-click the section instead of checking it. These will appear in blue with a "?" when the preset is loaded, prompting you to decide.



Step 8: Load a Preset

Click the "Select Preset..." dropdown and choose from your saved presets. Modulo will instantly select all your saved sections.





Your sections are selected automatically — review any blue "requires decision" items, then click "Generate Document."
